

Successfully implementing a **Phone-free Program** with the **FONOF** pouch and Naotic solutions

A universal **Educational Priority**

With the rapid rise of smartphones and connected devices, schools worldwide are **facing new challenges**: reducing distractions, improving student focus, and ensuring a healthier, calmer learning environment.

Structured Phone-free programs offer an effective way to keep devices aside during school hours, supporting students' well-being and academic success.

Phone-free program

for a calmer and more focused school environment

A Clear Educational Framework

Many countries have already introduced **restrictions on smartphone** use during the school day.

The objective is not to ban technology altogether but to create designated screen-free times and spaces, ensuring a **balance between learning with digital tools and necessary disconnection periods.**

An Organizational Challenge

Schools and local communities need solutions that are practical, secure, and affordable.

The challenge is to support institutions with **reliable, durable, and easy-to-deploy systems** that can be scaled to fit different school environments.

The educational and social benefits of Phone-free program implemented with FONO pouch

With FONO, Nautic offers much more than a compliance tool: a comprehensive solution that protects students, facilitates teachers' work and reassures parents.

Promoting concentration and learning

By neutralising calls, notifications and screen access, **FONO** allows students to **focus fully on their lessons**. Trials have shown increased attention, smoother lessons and a measurable improvement in academic results.

Improving the school environment

Effectively putting phones away **reduces conflicts** related to their use, **defuses tensions** and creates a more **peaceful environment** in the school. **FONO** thus contributes to a climate of trust between pupils, teachers and parents.

Strengthening social relationships

Without screens as a refuge, pupils **interact more** with each other, developing **richer social interactions** and a **stronger collective spirit**. The digital break becomes a moment of renewed conviviality.

58 %
of pupils

say they are distracted by their own smartphones in class, and **53% are distracted by their classmates' smartphones.**

45.5 %
of students

have experienced cyberbullying at least once, and **20% experience it several times a month.**

-20 %
decrease

academic performance in relation to digital distractions and the **presence of smartphones.**

FONOF: the reference solution

A simple, economical and secure response to the directive

White paper

Expert design

FONOF was conceived and developed by the design team at PORT Designs, which specialises in technical luggage.

The result is an ergonomic, robust and durable pouch that is perfectly suited to the realities of school life.

Total wave blocking

Thanks to its anti-RFID lining, **FONOF neutralises all transmissions and receptions** (calls, notifications, ringtones). Phones are completely isolated, guaranteeing an effective digital break.

Universal compatibility

FONOF safely accommodates smartphones up to 7 inches with their protective cases, covering all models used by secondary school pupils.

Practical and durable features

- **Transparent pocket** on the back: allows you to insert a badge or personalised card (photo, name, class), **avoiding confusion** between identical pouches. Students can easily recognise their pouch, and staff can carry out quick checks if necessary.
- **White marking area**: facilitates collective identification by number or name.
- **Can be personalised**: school or community logo to reinforce visual identity and sense of belonging.
- **Recycled, water-repellent outer material**: resistant to everyday use and environmentally responsible.
- **4-year guarantee**: designed to last for a full secondary school cycle.

Secure and quick magnetic closure

A magnetic closure system ensures reliable locking, with no sharp edges or risk of scratches. It is **simple, intuitive and quick to use**, allowing each student to secure their phone independently as soon as they arrive at school.

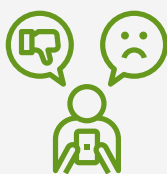

A well-designed unlocking system for smooth operation

Each pouch can only be opened with an aluminium unlocking base. **Schools can deploy several bases**, fixed in strategic areas (hallway, exit, school life) or worn around the neck by authorised staff.

This system ensures smooth, secure and quick return at the end of the day.

The educational and social benefits of Phone-free program implemented with FONOF pouch

Preventing cyberbullying

By **limiting digital usage** during school hours, **FONOF** reduces the risk of offensive content being shared and protects pupils from forms of online harassment. A tool for **prevention** and **protection** of the school environment.

Supporting mental health and wellbeing

Less screen exposure means less eye strain, less stress and better sleep quality. **FONOF** contributes to students' overall **well-being**, which is essential for educational success.

Ensuring the integrity of assessments

During examinations, **FONOF** prevents access to mobile phones and eliminates any attempts at **electronic cheating**, ensuring fairness among students and the credibility of assessments.

FONOF at the forefront, supported by the Nautic ecosystem

Sustainability
and confidence

4-year warranty

or the duration of a full cycle of secondary school education. This long-term guarantee illustrates Nautic's commitment to reliability and peace of mind for educational establishments.

FONOF: the priority solution

- **Economical:** a lightweight, easy-to-deploy solution at an affordable cost, ideal for large-scale deployment.
- **Practical:** quick and easy to implement, without the need for heavy infrastructure.
- **Effective:** guaranteed disconnection
- **Easy to manage:** immediate identification by students and simplified recognition by staff.
- **Overall positive impact:** improved school environment, reduced bullying and better mental health for students.

FONOF meets most of the needs of schools and is the natural choice for implementing a peaceful and effective phone-free program.

Complementary solutions **Made in France**

For more specific requirements, Nautic also offers three solutions manufactured in France.

These products complement the **FONOF** offering and enable management to be tailored to the specific circumstances of each institution.

Tabidock S36

Simple to deploy, ideal for collective management

Self-service station for 36 smartphones.

Storage in classrooms or supervised areas.

Tabisafe S30

Encourages student responsibility

Cabinet with 30 lockers, with or without smart charging.

Individual security with a locker assigned to each pupil.

Tabibox FS1

Centralised management organised by institutions

Shared cabinet for 40 smartphones, with USB-C charging and LED indicators.
Shared security for a group of students or an entire class.
